

DIAGONAL RIB TUNNEL

Cultivate
in all simplicity

Adaptability

➤ For intensive production

or direct seeding, we have diagonal rib plastic tunnels. Current equipment of gardening and horticulture, diagonal rib tunnels offer an exceptional functionality.

Lateral aeration by rolling

Diagonal rib roof limiting the impact of condensation on the crops

Quick assembly

➤ Tunnel assembly is simplified

thanks to research on structure optimisation carried out by the CMF Group BN greenhouse design offices. All the structures meet the EN 13 031 standard for more reliability.

Robustness

DIAGONAL RIB TUNNEL

Cultivate
in all simplicity

MODEL

Diagonal Rib 8 Tunnel

DIMENSIONS

Width (W)	8,00m
Maximum mesh	2,25m
Height to roof (F)	3,91m
Height below cultivation platform (S)	2,50m
Clearance 50cm	1,71m

ROOFING

Single wall	Oui
Double inflated wall	Oui

AERATION

Main slope hinge	Horizontal aeration by rolling/band retraction
Pinion or front hinge	Aeration by rolling/Folding face

DOOR TYPES

Type	Semi-rigid/Gate
------	-----------------

Notes

- Diagonal rib roof limits condensation.
- Different lengths available.
- Set of roofing solutions.
- Optimised clearance.
- Choice of aeration types.
- Variable stabilisation modes according to climate load.
- Groupama Approved specifications (especially for PO area: Pyrénées Orientales).
- Structure meets the EN 13,031 standard.
